**RE:**

Dear Dr.

## **BILATERAL LOWER EXTREMITY VENOUS DOPPLER**

Duplex doppler imaging of the lower venous system was performed. Flow measurements and static images were obtained during real time sonography.

History: Rule out deep vein thrombosis.

This study is unremarkable with normal flow, compressibility and augmentation identified bilaterally at the levels of the common femoral, superficial femoral and popliteal veins.

No thrombus identified.

No filling defect noted on static imaging to indicate clot.

**IMPRESSION: NO EVIDENCE OF DEEP VEIN THROMBOSIS.**

Sincerely,

Board Certified Radiologist
